

ALEX™ is designed to support development of cross-organisational Information Governance and Information Strategies by establishing a framework to Strategise, Plan, Govern, Manage Change and Execute improvements.

Why ALEX™ ?

- ✓ Enhanced visibility into data
- ✓ Better understanding of information assets
- ✓ Better alignment to business outcomes
- ✓ Increased efficiency with more flexible and fast processes and reduced cost

The Business Challenge

Information governance programs are central to an organization's success in assuring business outcomes and increasing business value from reusing enterprise information assets. One of the most important challenges arise from identifying which critical, differentiated or required business processes and desired business outcomes or innovations hinge on the effective governance of which kinds of information.

Information governance is a priority of IT and business leaders as a result of various pressures, including regulatory compliance mandates and the urgent need for improved strategic planning and decision-making.

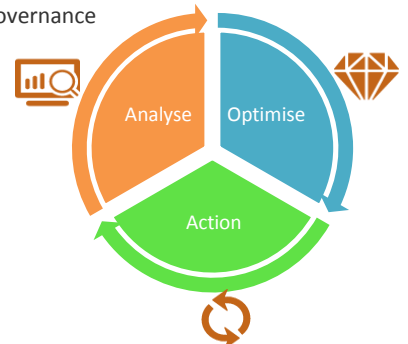

What does Alex Provide?

The ALEX™ for Information Governance and Strategy offering, improves the business outcome by providing an agile and collaborative Information Management platform that helps business and technical users develop a shared understanding of the importance, nature and characteristics of end-to-end information process flows across technical and organisational boundaries.

ALEX™ does this by providing innovative Advanced Data Visualisation, with integrated Search and built-in Analytics (including lineage and impact analysis), augmented by Automated metadata scanners with full Change Management and Audibility, along with quick-start configurable governance and business process templates to support Information Governance activities (including definitions of roles, a clear governance model, and metrics to measure progress).

Why ALEX™ for IIM?

- Helps business and technical users develop a shared understanding of the importance, nature and characteristics of information and processes across the organisation in order to set better strategies
- Accelerates Information Governance and development of Usage and Optimisation Strategies
- Improves end-to-end understanding of Information Processes that supports effective and sustainable Governance
- Supports meeting of regulatory or compliance requirements
- Helps identify and exploit the true value of strategic information assets for competitive advantage and facilitates the consistent use of information assets across the enterprise.
- Reduces on-going business and operational risks by capturing and documenting business outputs
- Increases business efficiency by reducing the cost of on-going support and improvement activities associated with Information Governance

Engage with ALEX team for a better understanding of how ALEX could help you protect and enhance your business information assets today
